

Web Project Full Summary

1. Technologies & Tools

- Frontend: HTML5, CSS3, Bootstrap 5, JavaScript
- Backend: PHP
- Database: MySQL (via XAMPP/phpMyAdmin)
- Mailing: PHPMailer + Gmail SMTP
- Editor & Server: VS Code, XAMPP (Apache + MySQL)

2. Project Structure

web_project/

- index.html ← Optional landing page
- register.html ← Registration form (Bootstrap + JS validation + dark-mode toggle)
- login.html ← Login form (Bootstrap + JS validation + dark-mode toggle)
- dashboard.php ← Session-protected profile display + dark-mode toggle
- register.php ← Handles signup, password hashing, email-verification code gen & send
- login.php ← Handles signin, verifies email, checks password, starts session
- verify.php ← Reads code, flips is_verified flag in users table
- edit_profile.php ← Lets logged-in user update username & email
- delete_account.php ← Deletes user row and destroys session
- logout.php ← Destroys session and redirects to login
- config.php ← Database connection (mysqli)
- send_verification_email.php ← PHPMailer helper
- style.css ← Global styles + dark-mode rules
- PHPMailer/ ← PHPMailer library files

3. Database: 'users' Table

- id INT AUTO_INCREMENT PRIMARY KEY
- username VARCHAR(100) User's display name
- email VARCHAR(100) User's login email
- password VARCHAR(255) Hashed password
- is_verified TINYINT(1) Email verification status (0 or 1)
- verification_code VARCHAR(255) Verification token
- created_at TIMESTAMP Account creation timestamp

4. Feature Walk-through

- a) Registration: Form with JS validation; register.php hashes password, generates code, inserts user, send
- b) Email Verification: verify.php updates is_verified via link code
- c) Login: Form with JS validation; login.php checks verification, uses password_verify, starts session
- d) Dashboard & Sessions: session_start(), redirects unauthorized, displays profile info
- e) Profile CRUD: edit_profile.php updates username/email; delete_account.php removes user
- f) Logout: logout.php destroys session
- g) Front-end & Back-end Validation: JS checks and PHP prepared statements
- h) Responsive Design: Bootstrap included on all pages
- i) Dark/Light Mode: style.css dark-mode rules + toggle script on each page

5. Testing Checklist

- Register → verify email → login → dashboard
- Edit profile → changes reflected
- Delete account → user removed → logout
- Dark mode toggles on all pages and persists
