Abstract

An abstract is a concise summary of a research paper or entire project. It is an original work, not an excerpted passage. An abstract must be fully self-contained and make sense, without further reference to outside sources or the actual project.

Acknowledgements

We would like to thank the Department of Computer Science and Engineering, Leading University, Sylhet 3112, Bangladesh, for supporting this coursework.

Dedication

- The dedication is the writer's personal acknowledgment indicating his or her appreciation and respect for significant individuals in the writer's life. The dedication is personal; thus, any individuals named are frequently unrelated to the topic of the dissertation. Indeed, it need not be academic in any way.
- Typically, the learner dedicates the work to the one or two individuals who instilled in the learner the value of education and the drive to succeed in educational pursuits. Learners dedicate dissertations to relatives, immediate family, or significant individuals who have supported them or played a role in their lives. Some learners dedicate their dissertations to their higher power.

Chapter 1

Introduction

1.1 Background

The project background is a one-page section of your project proposal that explains the problem that your project will solve. You should explain when this issue started, its current state and how your project will be the ideal solution.

1.2 Motivation

The motivation section of your report should explain why your problem and solution are important and valuable. It should answer questions such as: What are the benefits or implications of your work for your field, domain, or society? What are the goals or objectives of your work? How does your work fill a gap or solve a problem that has not been solved before? You should use clear and persuasive language to convey your enthusiasm and passion for your work. However, you should avoid making exaggerated or unrealistic claims, as this may undermine your credibility.

Chapter 2

Background Study

2.1 Review Previous Work

Chapter 3

Methodology

[1]

Chapter 4

Structural Design

1. System: University Management System.
2. Actor: Students, Faculty Members, Administrators, Admin.

4.1 Use Case Diagram

Figure 4.1: Use Case Diagram

4.2 Data Flow Diagram

Figure 4.2: Data Flow Diagram

Chapter 5

Limitations and Future Work

5.1 Limitations

- Wrong inputs will affect the project outputs.

5.2 Future Work

There are several features of the project that would be quite challenging to be added. The desirable features that HelpMate could have are,

- Integrate Google Classroom API.

Chapter 6

Conclusion
